

	Reel	1-2	4-7
Tall fescue	Rotary	2-3	5-7

5. Collect the unused fertilizer and pour it back into the bag.

6. Sweep or blow fertilizer that has landed onto drive-ways, walkways, or roads back into lawn. To minimize environmental contamination, fertilizer materials should not be allowed to move into storm sewage or other water systems.

All fertilizers may burn turf if improperly applied. Never exceed the recommended rate or the lawn may be damaged.

Liming-Another important factor in plant growth

the best time to water  
 less wind and lower  
 water loss at night through  
 percent less than during midday ...  
 also suggest that irrigating after dew  
 increase disease problems. However,  
 to dew formation or after the dew has  
 morning sun and/or wind extends  
 surface moisture and increases disease..

Irrigation is one maintenance practice  
 Light, frequent irrigations produce  
 systems. A shallow root system  
 plant nutrients and soil moisture.
