

Cleaning + Sanitizing + Disinfecting

WITH BLEACH

Washing high touch surfaces in your home or business is an important step to protecting yourself and others from illness and disease.

Cleaning

Clean surfaces to remove visible dirt and debris prior to sanitizing or disinfecting.

Wash surfaces with soap + warm water

Sanitizing + Disinfecting

Food-contact surfaces

Reduce the number of germs to a safe level.

2 tsp bleach + 1 gallon water

1 tsp bleach + 1 gallon water

Hard surfaces

(e.g. toilets, doorknobs, sinks)

Kill germs on surfaces and objects.

Bodily fluids

(e.g. blood, vomit, diarrhea)

Disinfect surfaces and objects contaminated with blood and bodily fluids.

NEVER mix bleach with anything but plain water.

Use bleach solutions in well-ventilated areas.

Mix bleach solution fresh daily to ensure effectiveness.

Verify concentrations with a chlorine test strip.

Allow surfaces to air dry after sanitizing or disinfecting.

For safety, always add bleach to water, not water to bleach.
