

## ARCHERY RAI

Control over the range will be through verbal commands, or a combination of those commands,

**Cease fire** - The verbal command to cease firing (4 or more) or a red light requires a verbal command and remove any arrow from the string. The presence of an unsafe condition downrange will result in a verbal command for that end. Any arrow shot after the end of a firing period will result in the loss of that end by the 4-H'er.

**Shooters to the line** - Either the verbal command or a green light indicates the beginning of a firing period for each flight or relay.

**Commence firing** - Either the verbal command or a green light indicates the beginning of a firing period for each flight or relay.

**Flight completed, score your target:**  
**arrows** - A clear verbal command or a signal will be used to indicate that the range is clear to score targets and retrieve arrows.

**Resume firing** - Either the verbal command or a green light indicates the signal to resume firing after an interruption.
